Nexus Collection

Where Nature
Meets Technology

Nexus – the connection between
technology and nature
for the mobility of tomorrow

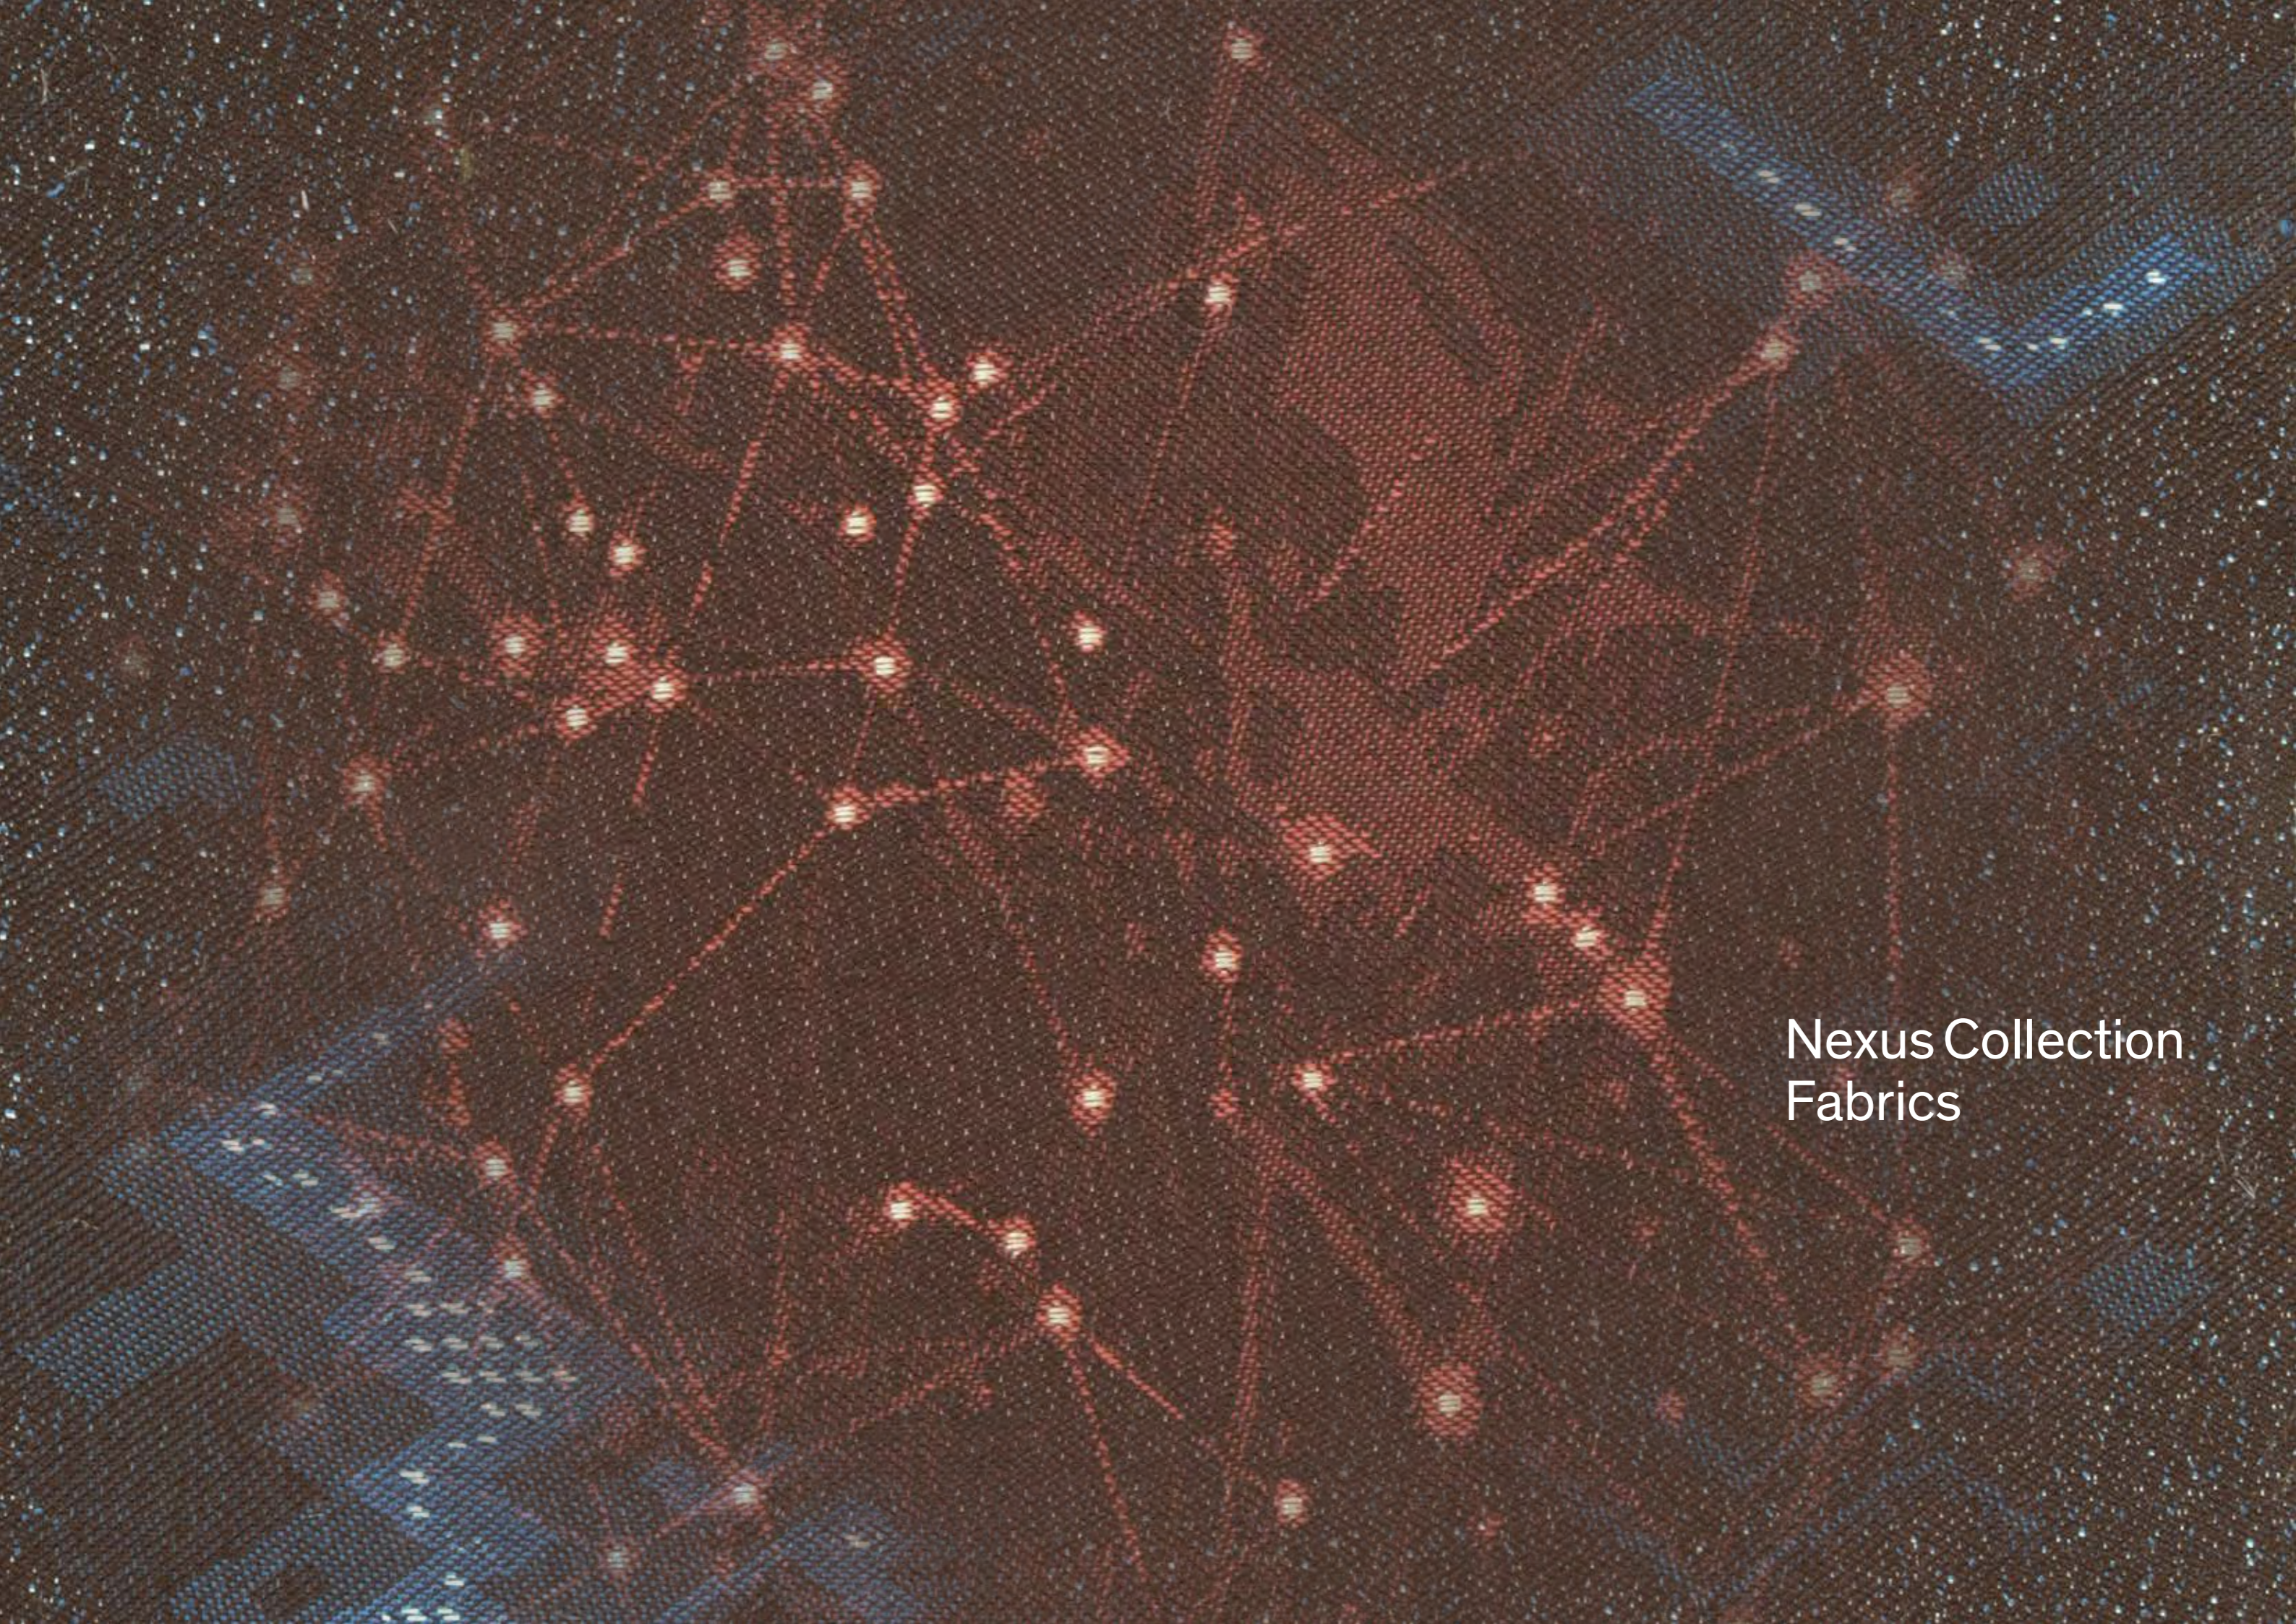

The Nexus collection brings together technological elegance and natural inspiration, designed specifically for highperformance environments such as aircraft and trains. It meets the demands of modern travel with efficiency, durability, and a clear focus on people and their needs.

Organic lines merge with technical and graphic clarity—an intentional duality that creates calm, orientation, and a sense of sensuality in hightraffic spaces. Sensory design featuring soft textures, matte surfaces, and textile depth provides visual serenity and a tangible feeling of wellbeing.

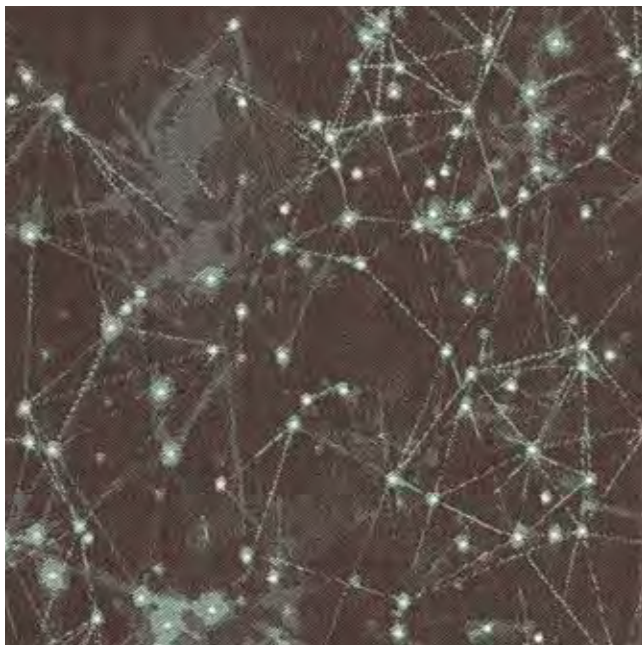

Wool blends and structured carpets combine functionality with a natural aesthetic. Dirtresistant properties, high durability, and the use of recycled materials underscore the commitment to sustainability and environmental responsibility.

The color concept blends warm earth tones with cool blue shades and targeted accent colors such as warm yellow or lobster red. The result is contemporary, atmospheric spaces that reflect current trends while conveying a longlasting, futurefocused design language.

The image shows a close-up of a carpet with a complex, repeating pattern. The background is a dark charcoal grey. Overlaid on this are vertical stripes of a slightly lighter, textured grey. Interspersed among these stripes are irregular, vein-like patterns in a vibrant orange-red color, reminiscent of marbled paper or stone. The overall effect is a rich, textured, and somewhat abstract design.
